Release Notes

Pukka-J DICOM Explorer 6.2.6
(Released 08/04/2019)

Modality Worklist QueryLevel
Fix for an issue where because no query level was set in the client modality worklist anymore, the server side defaulted to series which resulted in a single result being returned. The server side has been modified to not look for a query level for a Modality Worklist Query.

Worklist Query Columns
Modified the order of the columns in the return query result for target name and AET for mapping with the diary.

Dicom Dictionary Update
Added tags to the Dicom Dictionary.
