## Release Notes

### **Pukka-J DICOM Explorer 6.3.8**

(Released 11/02/2022)

#### **HL7 Charset**

Added Windows-1252 to HL7 Charsets.

#### **Sequence Array Out of Bounds**

Fixed an issue with an Array OOB Error when creating a byte array for a sequence. If the Strings contain a multi-byte character, the size of the buffer would be short because the buffer was created by counting the number of characters, not the bytes required. This has been changed to get the bytes before doing the count.

#### **HL7 Quote Escaping**

Added a fix for the issue where if a ' in a HL7 message was preceded in the text by a \, that it would fail to be escaped in the SQL insert after the \ was itself escaped.
