## Release Notes

### **mint.jar 1.12.00**

(Released 28/01/2019)

#### **Re-UID Node**

A new filter node has been added to allow DICOM files to have any UIDs modified as it passes through the network. See the updated manual for more details.

#### **CFIND Tag Streaming Option**

A new option has been added to the DICOM Output Port to enable / disable the streaming of a CFIND request. Previously, the default was to stream the CFIND request with each tag in a separate PDV packet and a continuation flag. The default has been changed to buffer the request in order to send it in a single packet (provided it is below the Max PDU Size). The streaming can be optionally enabled.
