## Release Notes

### **mint.jar 1.22.00**

(Released 12/05/2020)

#### **Move Controller**

Create a taskbar for the Nexus network display to allow tasks to be created to do things like drive CMOVE processes.

#### **ExecNode**

Fixed a trim issue on the file path for the inbound file to the ExecNode.

Added an option to specify a results location for DICOM files that are produced from the process called by the ExecNode.

Added option to forward the generated results and to reconcile with the data in the original inbound DICOM file.

Modified the ExecNode to parse the JSON output from the exec process to add the mapped values to the DICOM header.

Fixed an NPE when a JSON mapping is missing when updating the DICOM header.

Added in an option to execute the externally called process in a separate thread to enable a response to be sent to the input provider without having to wait for a script that may take a significant time to return.

#### **DicomToHL7Node**

There was a case issue bug in the lookup to check if a study had already been processed that was only apparent on a Linux OS.

Added an option to the DCMTToHL7 Node to turn off the UID checking and thus allow multiple HL7 messages for a study.

Added a temporary custom message output.

Added an option to not save the generated messages.

#### **MigrationNode**

Fixed a bug with the migration input node where it used toUpperCase to do the SOPInsUID lookup for previous images which only affected Linux OS installs.
