mint.jar 1.22.11

(Released 18/03/2021)

CMOVE Proxy

When proxying to multiple destinations, it is possible that if a CMOVE is sent to systems that don't have the study/series an error is sent in the cmove response to indicate this which means that although the data was transferred by the appropriate node, the response to the requestor includes failures and throws out the image count. Single failures are now ignored when creating the composite CMOVE response.
