Release Notes

mint.jar 1.23.02
(Released 07/12/2021)

PID Manager Node
Added the PID Manager swapping to the store init method, otherwise the workflow job was added for the wrong ID.

Workflow Node
Workflow node now sends HL7 message for all unsolicited DICOM.
Modified the point at which the WorkflowJob is created and the messages sent to allow the header to be edited both before and after the node in the pipeline.
