Release Notes

pjk.jar 1.16.01

(Released 28/05/2021)

HL7 Message

Added in an option to add a custom segment via a segment id string to the HI7MessageFactory.

CFIND

Updated the study root level query tags to include some sequences that are in the standard.

Added in the query level to the CFIND data tags.

Added option to the HI7Message to get the character set.

Max Tag Size

When retrieving DICOM files that have only been indexed rather than stored, it was possible that the max tag size was hit. The system max tag sizes for retrieve are now configurable and used during such a retrieve process.

CFIND Worklist Proxy

Fixed and issue with the tag length for sequences in the CFIND proxy where the length was being set as a specific value even for sequences that were encoded with -1 by the provider.
