Release Notes

pjk.jar 1.17.03

(Released 16/12/2021)

DICOM Exception Transient Detection

DicomException now has the option to record if the issue was a transient one or not to allow different higher level handling of this.

This is used when recording an association rejection response.

CMOVE Response Codes

Normalised the internal response codes with the DICOM ones.

Empty File Cleanup

Fixed an issue with deleting an "empty" directory where there is an empty file in there such that the size appears to be 0 but the folder can't be deleted because it's not empty.
