Release Notes

pacsology.jar 1.19.00
(Released 05/04/2022)

MS SQL Server Integration
Allow database node to be used with MS SQL Server.
Added knowledge of DB Type to connector.
Refactored the ResultSet parsing.
Don't look for table name in SQL as it is null, the SQL needs to get the field AS TABLENAME.COLUMN in the query.
Changed some StringBuffer calls tp StringBuilder.
Refactored the find method for Instance Paths.
Create a new SQL Query Factory to handle differences in SQL between MySQL and MS SQL.
Refactored Session SQL to new Query Factory.
Update the concrete implementations of the database connector to use changes so far.
Reversed the default number of images, series and studies.
Allow turning auto create DB off.
Fixed an escape issue with ' in SQL Server.
Updated model classes to allow query results to be obtained from just the column name for the table to make the system compatible with SQL Server.

Build Update
Couple of spot bugs fixes for sync and updated build for release=8 rather than target and source.
